

T 150

T 500

The ALKO T 150 & T 500 are the easy path to creative pond design in your gardens. The pond trays are made of UV-resistant, frost resistant and 100% recyclable PE material. The special colouring with a slightly reflective surface provides colour nuances and contrasts as occur in natural bodies of water

NATURALLY DESIGNED

The special coloring with a slightly reflective surface provides color nuances and contrasts as they occur in natural bodies of water . With stepped biotope levels & a reflective black surface, a natural pond can be perfectly designed - including the natural play of color and contrast in the water.

LARGE MARSH ZONE

When planted and decoratively arranged with stones, the wide bank zone or marsh zone offers the perfect “natural” transition from artificial pond to your garden landscape. The large marsh zone enables plantings that seamlessly transition into the surroundings.
