PATENT
PENDING

Makes 4 perfect pits for planting simultaneously!!

Now !

- ✓ With improved light weight Italian gear boxes
- ✓ Available for staggered planting

- A very critical operation in land preparation is the making of pits.
- For the healthy growth of the plant it is imperative that the pits should be uniform in size and depth.
- Manual pit making is expensive and it does not ensure the required diameter and depth are maintained.
- The cost of manual digging of pits is also high and the result not satisfactory. There has been a need for an efficient and effective implement to make pits for planting.
- Tractor Mounted 4 Hole Pit Digger makes 4 uniform perfect pits simultaneously and saves cost

4 HOLE PIT DIGGER FOR RECTANGULAR PLANTING
MODEL - 333

4 HOLE PIT DIGGER FOR STAGGERED PLANTING
MODEL - 999

OUTSTANDING FEATURES

- The machine can be attached to any tractor of 45 HP and above – Model 333 for straight line planting & 35 HP and above - Model 999 for staggered planting
- 4 pits are dug simultaneously; the diameter of each pit is up to 15 inches & with a depth of up to 24 in.
- The distance between the rows can be kept up to 13 feet and for between plants up to 6.5 feet.
- A single operation of digging 4 pits takes 30 seconds - makes approximately 4000 pits a day!
- Pits dug are of uniform shape and size
- The soil dug out is totally pulverized facilitating mixing of the soil with fertilizer applied to ensure a good plant growth.
- Small stones and roots are taken out by the machine.
- The machine is extremely economical in operation.
